Monthly Investment Analysis Review

March 2023

Monthly Economic Summary

General Economy

The UK manufacturing PMI fell to 48 in March 2023 from 49.3 in February. This pointed to an eighth straight month of falling factory activity. In addition, the UK Services PMI fell to 52.8 in March 2023 from 53.5 in February, below market expectations of 53. New orders growth accelerated due to improved client confidence, resilient demand for consumer services and a boost to spending from falling inflationary pressures. Overall, while still comfortably in “expansion” territory (ie a reading above 50) the UK Composite PMI fell to 52.2 in March 2023 from the 8-month high of 53.1 in February. Elsewhere, UK Construction PMI rose to 54.6 in February 2023 from 48.4 in January, easily beating market expectations of 49.1. The latest reading pointed to the fastest pace of expansion in the construction sector since last May, as commercial construction increased the most in nine months and civil engineering works returned to growth.

The UK economy expanded by 0.1% on quarter in the final three months of 2022, revised from a first estimate of no growth and following a 0.1% contraction in the previous period. Household consumption grew by 0.2%, driven by higher spending on net tourism, transport, and housing and despite the stubbornly high inflation and rising borrowing costs. There was also higher investment spending and higher government consumption, which was partially offset by businesses de-stocking their levels of inventories and a decline in the volume of net trade.

The UK trade deficit narrowed to £5.86 billion in January 2023, down from £7.15 billion in the previous month, as imports tumbled 6.3% and exports fell at a softer 5.1%. Goods imports were down 8.7%, as purchases from the EU fell by 8.8% and those from non-EU countries declined by 8.7%. The decrease in imports from the EU was mainly the result of falling purchases of machinery and transport equipment, chemicals, and fuels.

UK employment rose by 65k in the three months to January 2023, above market forecasts of a 52k rise and following a 74k growth in the previous period. The unemployment rate in the UK came in at 3.7% in November 2022 to January 2023, largely unchanged compared with the previous three-month period and slightly below market consensus of 3.8%. The number of unemployed people rose by 5k to 1250k, while employment levels increased by 65k to 32840k, driven by part-time employees and self-employed workers. UK average weekly earnings, including bonuses, rose 5.7% y/y to £630 in the three months to January, the smallest increase since July, following an upwardly revised 6% rise in the last three months of 2022. In addition, regular pay which excludes bonus payment, went up 6.5% to £589, with the pace of growth slowing for the first time since late 2021. Adjusted for inflation, total pay declined 3.2%, the most since 2009 and regular pay was down 2.4%, as inflation continues to squeeze UK living standards. Meanwhile, retail sales in the UK unexpectedly rose 1.2% m/m in February, following an upwardly revised 0.9% rise in January. It is the biggest increase in four months.

The annual consumer inflation rate in the UK unexpectedly rose to 10.4% in February from 10.1% in January, the first increase in four months and compared to forecasts of a decline to 9.9%. The biggest upward pressure came from cost of food and non-alcoholic beverages. On the other hand, a slowdown was seen in prices for transport, particularly motor fuels; furniture; housing and utilities; and recreation and culture. Elsewhere, the GfK Consumer Confidence indicator rose to -36 in March 2023 from -38 in February, pointing to the highest reading in a year amid better economic forecasts.

The public sector net borrowing (PSNB ex) in February 2023 was £16.7 billion, £9.7 billion more than February 2022 and the highest February borrowing since monthly records began in 1993, largely because of substantial spending on energy support schemes. The Bank of England raised Bank Rate by 25bps to 4.25% during the March meeting, in line with expectations, and pushing borrowing costs to fresh 2008-highs, aiming to bring inflation back to the 2% target.

In the US the unemployment rate edged up to 3.6% in February up from a 50-year low of 3.4% seen in January. The number of unemployed people increased by 242k to 5940k, and employment levels rose by 177k to 160320k. The US economy expanded an annualised 2.6% on quarter in the last three months of 2022, slightly less than initial estimate of 2.7%. The annual inflation rate in the US slowed to 6% in February, the lowest since September 2021, in line with market forecasts. The Fed raised the Fed Funds Rate by 25bps to 4.75%-5% in March, matching the February increase, and pushing borrowing costs to new highs since 2007.

The Eurozone economies failed to grow in the final quarter of 2022, compared with preliminary estimates of 0.1% growth and an upwardly revised 0.4% expansion in the previous three-month period. GDP grew in the Netherlands, Spain, and France, but contracted in Germany and Italy. The annual inflation rate in the Euro area eased to 6.9% year-on-year in March, its lowest level since February 2022 and slightly below market consensus of 7.1%. The European Central Bank raised interest rates by another 50 bps to 3.5% at its March meeting, as previously promised, further pushing borrowing costs to the highest level since late 2008, to help temper the region's stubbornly high inflation.

Housing

The Nationwide House Price Index in the UK declined by 3.1% y/y in March, the biggest annual drop since July of 2009. Compared to the previous month, house prices in the UK were down 0.8%, a seventh consecutive fall and compared to forecasts of a 0.3% decrease. The Halifax house price index rose by 2.1% from a year earlier in February 2023, the same pace as in the previous two months.

Currency

Stronger than expected GDP and inflation data saw Sterling appreciate slightly against the US dollar and the Euro during March.

March	Start	End	High	Low
GBP/USD	\$1.2007	\$1.2365	\$1.2381	\$1.1838
GBP/EUR	€1.1251	€1.1381	€1.1432	€1.1217

Forecast

Bank Rate was raised to 4.25% at the Monetary Policy Committee's meeting in March, with both Link and Capital Economics pencilling in rates to peak at 4.50% by Q2 2023.

Note: An historic risk of default and expected credit loss are only provided if a counterparty has a counterparty credit rating and are not provided for an MMF or USDBF, for which the rating agencies provide a fund rating. The portfolio's historic risk of default and expected credit loss therefore measure the historic risk of default and expected credit loss attached only to those investments for which a counterparty has a counterparty credit rating and also do not include investments which are not rated.

The Historic Risk of Default column is based on the lowest long term rating. If clients are using this % for their Expected Credit Loss calculation under IFRS 9, please be aware that the Code does not recognise a loss allowance where the counterparty is central government or a local authority since relevant statutory provisions prevent default. For these instruments, the Expected Credit Loss will be nil. Please note that we are currently using Historic Default Rates from 1990-2022 for Fitch, 1983-2022 for Moody's and 1981-2022 for S&P.

Where Link Group have provided a return for a property fund, that return covers the 12 months to December 2022, which are the latest returns currently available.

Rating Exposure

Historic Risk of Default

This is a proxy for the average % risk for each investment based on over 30 years of data provided by Fitch, Moody's and S&P. It simply provides a calculation of the possibility of average default against the historical default rates, adjusted for the time period within each year according to the maturity of the investment.

Chart Relative Risk

This is the authority's risk weightings compared to the average % risk of default for "AA", "A" and "BBB" rated investments.

Rating Exposures

This pie chart provides a clear view of your investment exposures to particular ratings.

Note: An historic risk of default is only provided if a counterparty has a counterparty credit rating and is not provided for an MMF or USDBF, for which the rating agencies provide a fund rating. The portfolio's historic risk of default therefore measures the historic risk of default attached only to those investments for which a counterparty has a counterparty credit rating and also does not include investments which are not rated.
